SUMMARY

Final-year Computer Science (AI & ML) student with strong foundations in backend development and problem solving. Experienced in building scalable API-driven systems using Java Spring Boot and Python, along with AI-based applications involving LLMs and retrieval pipelines. Solved 160+ DSA problems and focused on building scalable backend systems and solving complex engineering problems.

SKILLS

Programming: Python, Java

Backend & Systems: Spring Boot, Node.js (Express), FastAPI, REST APIs

Databases: PostgreSQL, MySQL

Tools & Technologies: Git, GitHub, Docker, Postman, LLM APIs

Core CS: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Complexity Analysis

AI & Data: Machine Learning, Natural Language Processing (NLP), Large Language Models (LLMs),

Retrieval-Augmented Generation (RAG), AI Automation, Prompt Engineering

Soft Skills: Adaptability, Attention to Detail, Communication, Independent Problem Solving

PROJECTS

LawMate – AI-Powered Legal Intelligence Platform

Jan - Mar 2026

Python, FastAPI, Java, Spring Boot, REST API, ChromaDB, Next.js, Gemini API, RAG

- Designed backend services using Spring Boot and FastAPI to orchestrate API workflows and handle large-scale document querying with optimized response handling.
- Built retrieval pipelines integrating structured data processing and AI components, enabling efficient querying and consistent response generation.

LogisticsHub – Scalable Inventory Management System

Mar 2026

Java, Spring Boot, PostgreSQL, JWT Authentication, REST APIs, Docker

- Developed REST APIs for shipment tracking and workflow management using Spring Boot, ensuring modular and scalable service architecture.
- Optimized database queries and integrated authentication, improving system reliability and scalability.

E-Commerce Backend Application

Feb 2026

Java, Spring Boot, PostgreSQL, JWT Authentication, REST APIs, React, Docker

- Built backend services for product, order, and inventory workflows using Spring Boot and PostgreSQL.
- Implemented JWT-based authentication and modular service design for scalable and maintainable architecture.

PROBLEM SOLVING

LeetCode – 200+ Problems [Profile]

Covered core topics including Arrays, Strings, Binary Search, Trees, Graphs, and Hashing, applying patterns like sliding window, two pointers, and recursion to solve problems efficiently with emphasis on time and space complexity.

ACHIEVEMENTS & RESPONSIBILITIES

Project Expo – 2nd Place (Housing Price Prediction System)

- Led development of a housing price prediction system using Python, Pandas, and XGBoost, optimizing model performance and securing 2nd place in a college-level project expo.

Chair – IEEE Student Branch

- Chair of the newly established IEEE Student Branch; led a team to successfully plan and conduct the inaugural event, coordinating responsibilities and ensuring smooth execution.

EDUCATION

Sphoorthy Engineering College

Hyderabad

Bachelor of Technology in Computer Science, (AI & ML) — CGPA: 8.3/10

Nov 2022 – June 2026
